HDL Project Engineer

Heather Campfield
HDL Public Involvement Lead

About the Project

The Alaska Department of Transportation & Public Facilities (DOT&PF), in cooperation with the Alaskan Region Airports Division of the Federal Aviation Administration (FAA), is proposing to upgrade the Haines Airport.

Purpose

- Extend airport service life
- Enhance aircraft operation safety and taxiing
- Improve airport access and drainage
- Establish heated storage for snow removal equipment

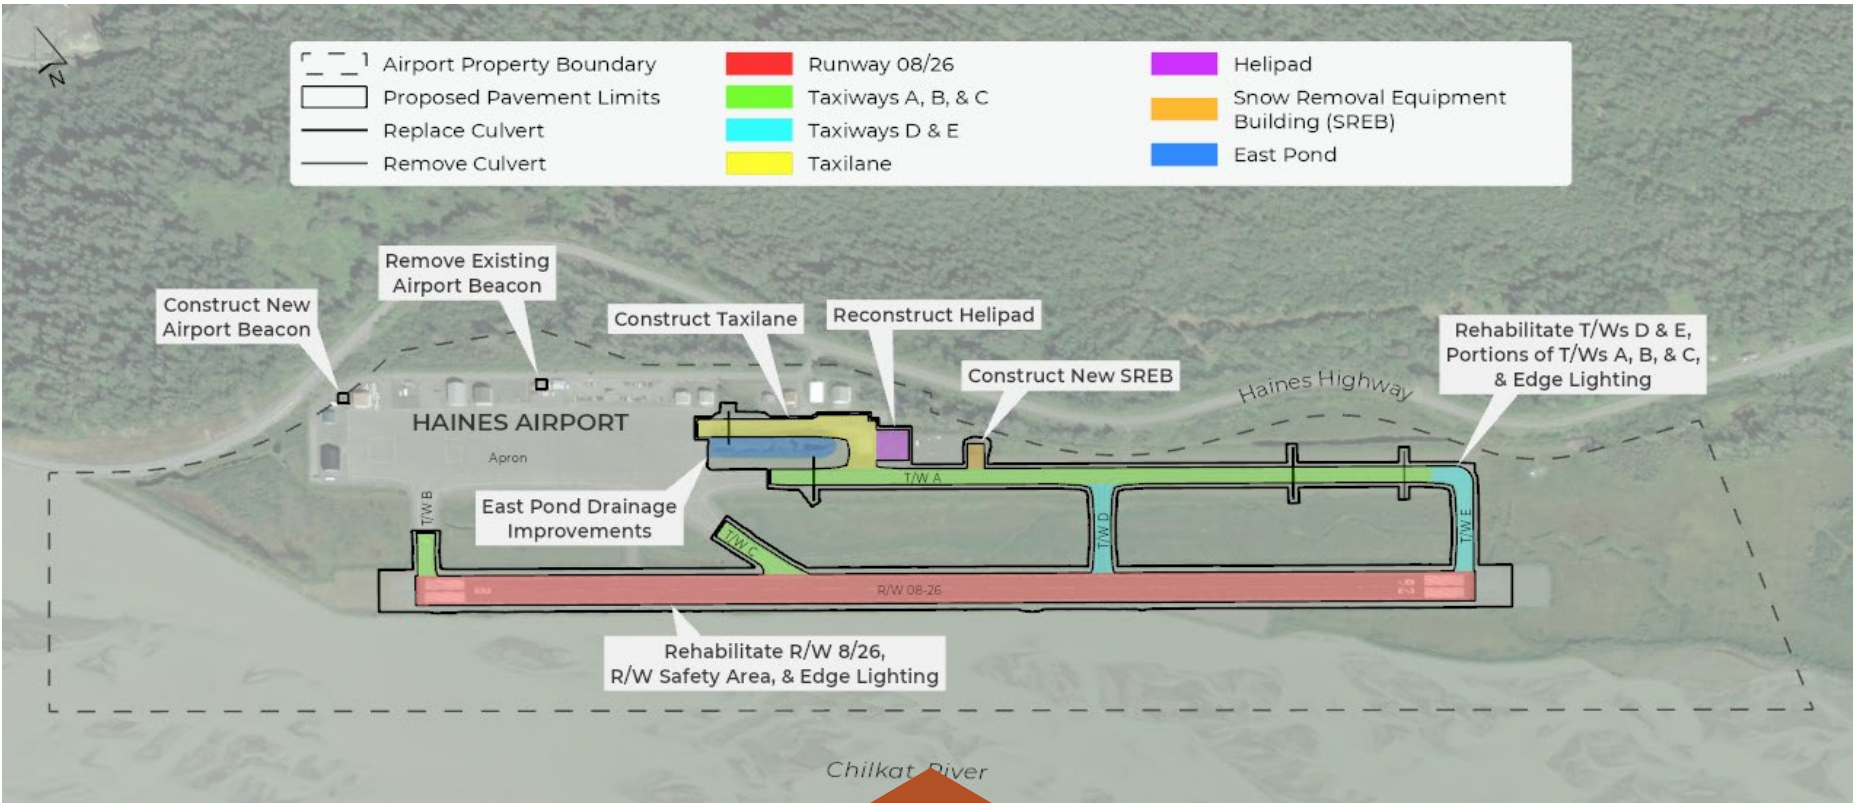

Need: Safety

- Pavement deterioration: Cracks and rutting
- Edge lights not meeting FAA standards (spacing and height)
- Diminished safety and maintainability due to non-compliant lighting
- Aging infrastructure: Edge light system, airfield signs, and beacon nearing end of useful life

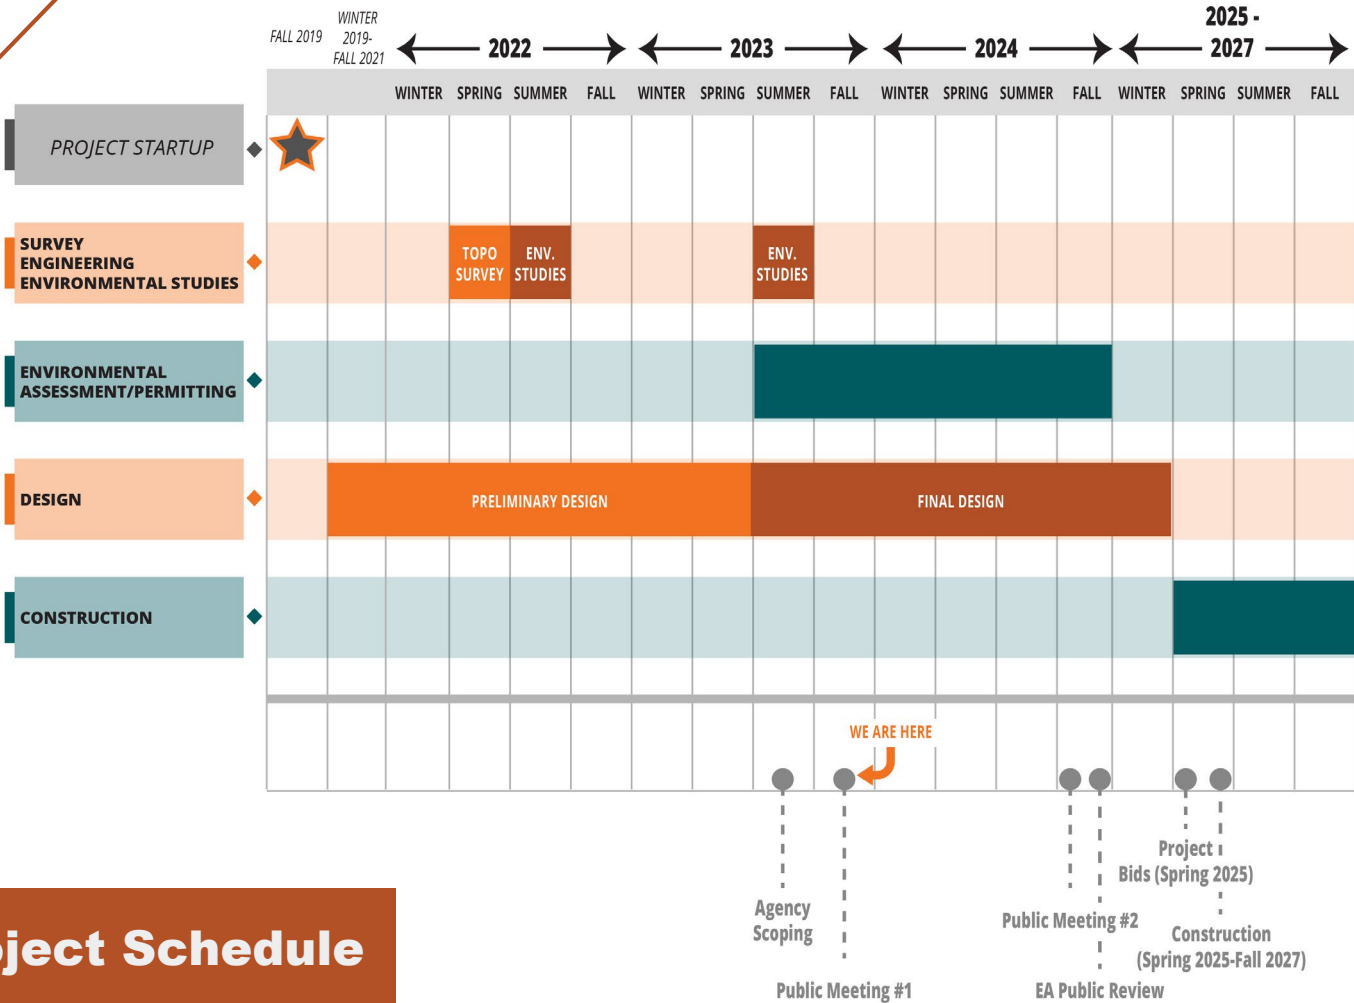

Need: Maintenance

- Culvert improvements for flow and fish passage
- Aging, undersized, or heaving culverts
- Inefficient snow removal equipment storage
- Frequent crack sealing needed
- Replacing pavement reduces future effort

Proposed Improvements
